

## LOCATION OF BLENHEIM'S LITHIUM INTERESTS, MALI.

The map below shows in red the locations of the Nimissila exploration permit and the Dieba prospecting permit, the subjects of conditional investment announced by Blenheim on 3 July 2017 (the Xantus transaction). The map also shows in blue the Menianbala and Djidje prospecting permits, which were the subjects of conditional investments announced by Blenheim on 30 March 2017 (the Nashwan transaction) and, in black, nearby lithium projects.

The Dieba prospecting permit lies immediately north of the Bougouni lithium project (Goulamina) held by Birimian Limited (“Birminian”, ASX:BGS), where Birimian announced on 22 June 2017 a JORC Mineral Resource of 32.9Mt at 1.37% Li<sub>2</sub>O for 451,000 tonnes of contained Li<sub>2</sub>O at 0.4% cut-off.

The Nimissila exploration permit lies immediately south of licences held by Kodal Minerals plc (“Kodal”, AIM: KOD), from which Kodal has reported wide, high-grade lithium pegmatite drill intersections. Kodal recently announced initial flotation test results on drill chips from its Kassokoro permit showing that high-grade lithium (spodumene) concentrate can be produced with recoveries of 80% to 87%. The test concentrates were of suitable quality for producing lithium carbonate with low levels of impurities.

The Board of Blenheim believes that Southern Mali has emerged as a promising lithium province where the presence of the rapidly maturing Birimian and Kodal projects is creating a critical mass of lithium development projects.
